| Notes                     |                |   |  |

#### Notes

Overload release: tripping class 10 A

Short-circuit protection: Observe the maximum permissible fuse of the contactor with direct device mounting.

Suitable for protection of Ex e-motors

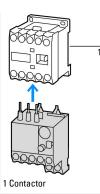

PTB 10 ATEX 3014

Observe manual MN03407003Z-DE/EN.

#### Notes

When fitted directly to the contactor a clearance of at least 5 mm is required between the overload relays.

Notes

**Notes** Ambient temperature: operating range to IEC/EN 60947, PTB: -5°C to +50°C Rated operational current: Making and breaking conditions to DC-13, L/R constant as stated

# Design verification as per IEC/EN 61439

| Design vernication as per 120/214 01455  |                   |    |  |
|--|-------------------|----|--|
| Technical data for design verification   |                   |    |  |
| Rated operational current for specified heat dissipation   | In                | А  | 9  |
| Heat dissipation per pole, current-dependent   | P <sub>vid</sub>  | W  | 1.7  |
| Equipment heat dissipation, current-dependent  | P <sub>vid</sub>  | W  | 5.1  |
| Static heat dissipation, non-current-dependent   | P <sub>vs</sub>   | W  | 0  |
| Heat dissipation capacity  | P <sub>diss</sub> | W  | 0  |
| Operating ambient temperature min.   |                   | °C | -25  |
| Operating ambient temperature max.   |                   | °C | 50   |
| IEC/EN 61439 design verification   |                   |    |  |
| 10.2 Strength of materials and parts   |                   |    |  |
| 10.2.2 Corrosion resistance  |                   |    | Meets the product standard's requirements.                         |
| 10.2.3.1 Verification of thermal stability of enclosures   |                   |    | Meets the product standard's requirements.                         |
| 10.2.3.2 Verification of resistance of insulating materials to normal heat   |                   |    | Meets the product standard's requirements.                         |
| 10.2.3.3 Verification of resistance of insulating materials to abnormal heat and fire due to internal electric effects |                   |    | Meets the product standard's requirements.                         |
| 10.2.4 Resistance to ultra-violet (UV) radiation   |                   |    | Meets the product standard's requirements.                         |
| 10.2.5 Lifting   |                   |    | Does not apply, since the entire switchgear needs to be evaluated. |
| 10.2.6 Mechanical impact   |                   |    | Does not apply, since the entire switchgear needs to be evaluated. |
| 10.2.7 Inscriptions  |                   |    | Meets the product standard's requirements.                         |
| 10.3 Degree of protection of ASSEMBLIES  |                   |    | Does not apply, since the entire switchgear needs to be evaluated. |
| 10.4 Clearances and creepage distances   |                   |    | Meets the product standard's requirements.                         |

| 10.5 Protection against electric shock                   | Does not apply, since the entire switchgear needs to be evaluated.   |
|--|--|
| 10.6 Incorporation of switching devices and components   | Does not apply, since the entire switchgear needs to be evaluated.   |
| 10.7 Internal electrical circuits and connections        | Is the panel builder's responsibility.   |
| 10.8 Connections for external conductors                 | Is the panel builder's responsibility.   |
| 10.9 Insulation properties                               |  |
| 10.9.2 Power-frequency electric strength                 | Is the panel builder's responsibility.   |
| 10.9.3 Impulse withstand voltage                         | Is the panel builder's responsibility.   |
| 10.9.4 Testing of enclosures made of insulating material | Is the panel builder's responsibility.   |
| 10.10 Temperature rise                                   | The panel builder is responsible for the temperature rise calculation. Eaton will provide heat dissipation data for the devices. |
| 10.11 Short-circuit rating                               | Is the panel builder's responsibility. The specifications for the switchgear must be observed.                                   |
| 10.12 Electromagnetic compatibility                      | Is the panel builder's responsibility. The specifications for the switchgear must be observed.                                   |
| 10.13 Mechanical function                                | The device meets the requirements, provided the information in the instruction leaflet (IL) is observed.                         |

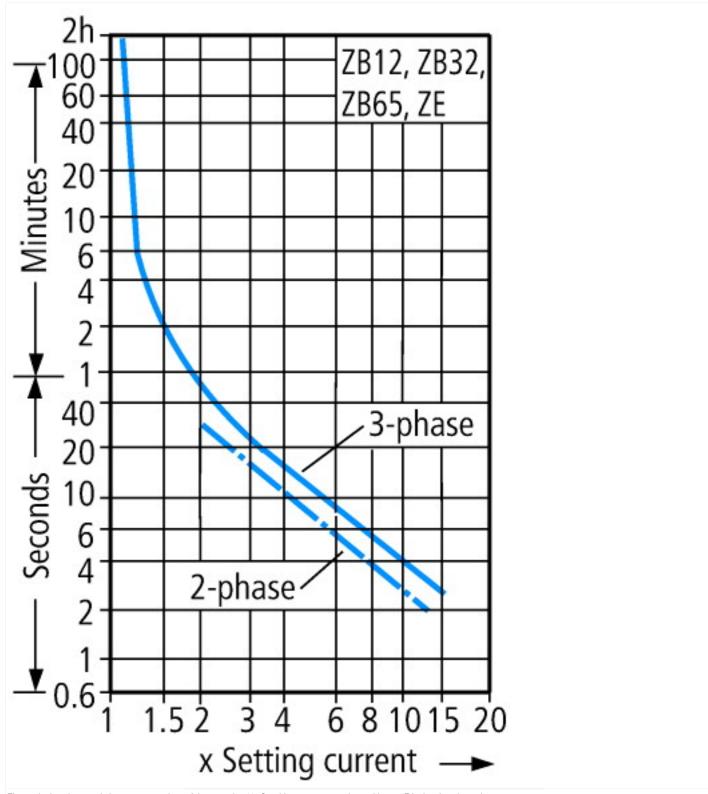

## **Technical data ETIM 6.0**

Low-voltage industrial components (EG000017) / Thermal overload relay (EC000106)

| Electric engineering, automation, process control engineering / Low-voltage switch technology / Overload protection device / Thermal overload relay (ecl@ss8.1-27-37-15-01 [AKF075011]) |   |                   |
|---|---|-------------------|
| Adjustable current range  | А | 6 - 9             |
| Max. rated operation voltage Ue   | V | 690               |
| Mounting method   |   | Direct attachment |
| Type of electrical connection of main circuit   |   | Screw connection  |
| Number of auxiliary contacts as normally closed contact   |   | 1                 |
| Number of auxiliary contacts as normally open contact   |   | 1                 |
| Number of auxiliary contacts as change-over contact   |   | 0                 |
| Release class   |   | CLASS 10          |

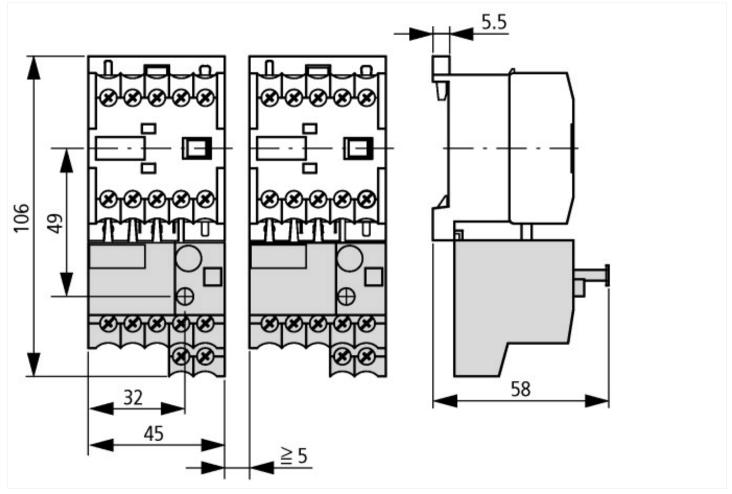

# Approvals

| Suitable for                         | Branch circuits  |
| Max. Voltage Rating                  | 600 V AC   |
| Degree of Protection                 | IEC: IP20, UL/CSA Type: -  |
|                                      |  |

These tripping characteristics are mean values of the spread at 20 °C ambient temperature in a cold state. Tripping time depends on response current. On devices at operating temperature the tripping time of the overload relay drops to approx. 25 % of the read value. Specific characteristics for each individual setting range can be found in the manual.
